VOXELGRID
WANTS
YOU

COMPANY

VOXELGRID is a fast-growing Start Up situated in Munich. With our patented Hard- and Software System we can scan existing buildings from inside and outside with incomparable speed and with our high-end technology we can offer the digitalization of large building stock at lowest possible prices worldwide.

TO SUPPORT OUR TEAM, WE ARE CURRENTLY LOOKING FOR:

BACK-END DEVELOPER PYTHON (m/f/d)

JOB DESCRIPTION

We are looking for an experienced Python developer (> 5 years). Your primary focus will be on developing the backend infrastructure of the multiple web services that we host internally. Together with our team, you ship new features for our platform. Thereby, you actively participate in delivering the best software possible experience for the users. You will ensure that these components and the overall application are robust and easy to maintain. You will be working closely with team members from different layers of the infrastructure such as frontend, backend, deployment and documentation. Therefore, a commitment to collaborative problem solving, sophisticated design, and quality products is important.

YOUR PROFILE

▼ Willingness to develop web applications using popular frameworks (e.g. Django, flask)

▼ Willingness to create a "python everywhere" environment

▼ You have experience in software engineering of larger projects, preferably B2B or SaaS products

▼ You can easily set up a local dev environment, spin up a Docker container or resolve a couple of merge conflicts

▼ You build features with an "you build it, you run it" mindset and are responsible for testing, deployment and monitoring of your code

▼ You value clean code (if pylint fails, you do not commit) and respect good branching strategies to collaborate with fellow developers

▼ You have been part of an agile development team. You favor open communication, constant feedback, and short decision paths

▼ An eye for design will be appreciated

SKILLS

▼ You have a profound knowledge of Python (5+) and experience with one of the popular frameworks (e.g. Django, flask)

▼ Familiarity with RESTful APIs

▼ Ability to read API documentation and write documentation to be used by external companies or by your team

▼ Knowledge of modern authorization mechanisms, such as JSON Web Token

▼ Familiarity with code-versioning tools such as Git

▼ Good knowledge of software architecture principles

▼ Fluency in English language

▼ Experience with Atlassian tools like Confluence and Jira (nice to have)
