With our patented Hard- and Software System we can scan existing buildings from inside and outside with incomparable speed and with our high-end technology we can offer the digitalization of large building stock at lowest possible prices worldwide.

Senior Developer

Job Description

We are looking for a Senior Full stack developer to support our development team. You will be working closely with cross-functional teams to ensure that your team delivers the best possible software experience to the users. Therefore, a commitment to collaborative problem solving, sophisticated design, and quality products is important.

Your Tasks

- You are responsible for the design and implementation of scalable software solutions
- You assist in enhancing existing software components and developing new features
- You provide technical leadership for the team of developers
- You assist in developing and maintaining quality software product code
- You can easily switch between front and back-end development based on requirements
- You build optimized, high-performance APIs

Your Profile

- Degree in Computer Science or a related field
- Minimum of 5 years of professional experience as Full Stack Developer
- Proven experience with multiple front-end languages and JavaScript frameworks, such as Angular, React, Vue
- Proven experience with back-end languages (preferably Python) and with one of the popular frameworks (e.g., Django, Flask, Celery)
- Experience with RESTful API design and Micro Service architecture standards
- Several years of professional experience in the field of software architecture
- Experience with writing unit tests and debugging
- Being comfortable in coaching and mentoring other developers
- Experience with code-versioning tools such as Git
- Knowledge of Docker and Kubernetes
- Familiarity with Databases, e.g., SQL

Nice to have

- Experience with machine learning / deep learning techniques
- Understanding of ROS
- Experience with Jira for planning and tracking work during the development lifecycle is a plus
- Knowledge of Linux commands
- Perform security tests, analyze and solve the security issues
